

July 2024 Club night

A small group of club members attended July's club night probably due to holiday season plus it was a very hot evening.

John Blake travelled from Wales to provide an interesting and varied demonstration. In fact, John showed us 3 separate demonstrations. He started by showing us how he created a metal finish onto a wooden tealight holder that he had made prior to the demonstration. Using embossing powder in layers and heating with a blow torch he created a colourful effect.

John then turned his hand to creating a useful item for any kitchen a Pestle and mortar made in ash and décor burned in with wire.

He then moved onto creating a useful needle holder creating a tight fit between the lid and container.

Members also brought in a couple of items made by them recently.
